“C-Print is a captioning technology for providing access to spoken communication. The C-Print technology is used to produce a text display of spoken information for individuals who are deaf and hard of hearing (or other individuals who may have difficulty understanding speech).”

The C-Print System

The C-Print system requires a trained transcriptionist who uses computerized abbreviations and condensing strategies to produce the text display of spoken information.

At the same time, the spoken information is displayed on a computer or mobile device.

The content can be saved and distributed as a transcript afterward.

In a classroom...

In a meeting...

The new C-Print Mobile app allows users to view captioning in a variety of settings, for example, in traditional classrooms, labs, and meetings. Users can also use the Mobile app to view captioning in remote settings, such as a classroom field trip.

Benefits

- Aids access to and understanding of spoken communication
- Helps facilitate communication
- Provides a record for review afterward
- Option for access to information by remote viewers
- Succinct delivery of spoken information

Potential Uses

- Classroom lectures
- Group discussions
- Business meetings
- Community and private meetings/events
- Presentations
