Introduction: Careers for Women in Design is an interactive application created in order to help, guide and support women in their search for professional goals towards a career in design or related field. Although this project was especially designed for women, men also can benefit from it.

The idea of creating this project came from my own experience with graphic design. My interest in continuing a career in design began many years ago, during college years at the Art School of the University of Puerto Rico. After I graduated from college, I became a graphic artist. My experience with art, photography and printing made me realize it was time to go to the next step: graphic design.

However, it wasn't easy. I was a single mother with two children. In order to move to the United States, I would have to save some money, check schools and locations, prepare applications and resumes, and design portfolios for several schools, as well as look for housing and employment.

I looked through books, maps, schools catalogs and other reference materials at the library. I browsed every catalog looking for the right school. Several schools attracted my attention, but didn't provide enough opportunities for students with families. There were numerous factors that made my chances of succeeding in graduate school a risk. Having been out of school for many years, and with a family to support, didn't make the most ideal situation.

I began to chat with people who came to the United States to finish their degrees. Some of them were parents and full-time students, and some were single. I asked them about their experiences with schools and their children's schools. How were they affected by the weather, location, transportation, and finances. They talked
about their successes and disappointments and the strategies and solutions they used to resolve their problems. I realized then the obstacles and frustrations I might be facing in the future, in order to put my plan to work.

Part of this information was gathered in a journal where I wrote all my findings and notes. I made telephone calls to universities and colleges to contact people in the design departments, housings financial aid offices, etc. Contacts to daycare centers, churches and government agencies were also essential. This information was crucial when the time to make a decision arrived. Some of the criteria I used in making my final decision included the following:

1. My personal interests, hobbies and skills
2. Universities and College
   a. Location
   b. Areas of Specialty: Design, Illustration, Computers, Advertising
   c. Recognition
   d. Strength and Weaknesses
3. Cost
4. Two year school, Four year, Graduate School
5. Transportation: public or private, airfare cost
6. Housing-Single/Family
7. Day care centers and schools (School District)
8. Community and neighborhood
9. Extra expenses
a. Health insurance
b. School materials
c. Extra money for unexpected emergencies

10. Weather (Clothing)
11. Extra curricular activities (clubs, etc.)
12. Job opportunities (on and off campus)

After considering these issues, I proceeded to fill out the applications and school paperwork. Once I was accepted and registered, I packed all my things and moved to Rochester with my children. I considered traveling during the summertime, so my children and I could get adjusted before the start of the new school season.

The following is a short summary of my work. The making of this project is my legacy to all women who find themselves in my situation—needing to make a major change in their lives. Today, women have a lot of opportunities in the professional world. Having a family, a full time job or few economic resources is not an obstacle anymore. Life is full of opportunities and only worth it if you take the chances.
In September 1991, shortly after we started classes, our professors made us write proposals for our thesis topics. (App. 1)

Women's issues related to design such as prejudice, job opportunities, equal salary, were topics that always called my attention. Another topic that intrigued me was the differences and similarities between the design professions: graphic designers, illustrators, computer artists, interior decorators, packaging designers, web designers, art directors, etc. I was sure that other women would share the same interest.

I had to select some members for my thesis committee in order to work out my project. They were Professor Roger Remington, Professor Nancy Ciolek and Professor Pamela Blum, from the School of Art & Design. In addition, I chose Professor Tina Lent from the College of Liberal Arst.

At the first thesis meeting on December 11, 1992, I explained my strategic plan to the committee. I showed a list of topics I would like to work with (App. 2), and at the end of the meeting everybody agreed that the thesis should be about "Careers for Women in Design." We discussed several tactics that might work in the realization of the project (App. 3). I should register in some interactive and computer graphic courses to create the Hypercard application. Professor Tina Lent recommended I design a questionnaire with some hypothetical questions to create a scenario about women considering begin a design career (App. 4). With all the data, I could construct an outline and begin my research.

Subsequently, all the important outcomes were put together at that initial meeting. The plan consisted of creating the HyperCard application. First, an introductory
stack consisting of the basic information and purpose of the project, navigational map, glossary with terms, bibliography, resources, etc. The second stack: The Career Definition Stack, containing several definitions of design careers. The third stack: Successful Women in Design with profiles of some of my favorite designers. The fourth stack: The Educational Stack with information about schools, curriculum, requirements, and extra-curricular activities. And finally, the fifth stack: The Jobs Stack: with information and hints about job hunting, professional development and continuing education.
For the project-planning phase, I began my research at the Archives & Special Collections in the Wallace Library at RIT. I looked through the library catalog using the following: key words, design, design education, women in design, design history, and career definitions.

Ms. Barbara Polowy, former Art and Photography Librarian showed me some resources she had prepared to help people with their search. These resources included bibliographies, books and magazines about design, illustration, art in general, computer graphics and others. She also showed me how to browse for additional materials at any Monroe County Library using the electronic catalog.

Following the electronic search, I made a visit to the reference and reserve sections looking for catalogs and manuals of universities. They also had career dictionaries where I found a large volume of job descriptions and salary listings.

I continued visiting the library for few days until I found some interesting books. I reviewed them carefully and found many examples regarding contemporary women designers and their contributions to the design field. New American Design by Hugh Aldersey-Williams and Ten Years of Women in Design/Chicago were essential in creating the introduction stack.

To help prepare the Women Designers Stack, I read the books Hybrid Imagery by April Greiman and The Graphic Design Portfolio: How to make the good one by Paula Scher. April Greiman's book tells about how she experimented with different design styles. She was one of the pioneers in digital art. She designed posters by using her photo in actual size and then manipulating and pixelating the image to create incredible pieces of art. She also used her creations to design fabrics.
On the other hand, Paula Scher spent her first years after graduation revising and re-designing many of her portfolio pieces. She finally was given the opportunity at Columbia Records of designing music covers for CD's. She won several awards including a Grammy for “Best Album of the Year.” These stories were very encouraging especially Paula Scher's. She continued focusing on her goals and dreams in the face of adversity. She worked hard to improve her work. It showed me her persistence and her courage to fight for her beliefs.

*Careers in Art* by Gerald Brommer; *Design Careers* by Steven Heller; and *Opportunities in Commercial Art and Graphic Design Careers* by Barbara Gordon described the options, the advantages of being a professional designer.

*Career Choices for Students of Art* from the National Associations of Schools of Art & Design, and the *Guide to American Art Schools* by John D. Werenko named innumerable choices for careers in art and design and analyzed dozens of schools around the country.

The following books: *The Artist's Guide to Art Market* by Betty Chamberlain, *The Graphic Artist's Guide to Marketing and Self-Promotion* by Sally Prince Davis, the *1993 Artist Market: Where & How to Sell* by Laurie Millerand and *The Professional Designer's Guide to Marketing Your Work* by Mary Yeung were good resources for those looking for new ideas to improve their work, do some freelance, or simply succeed in the corporate world.

*The Graphic Design Portfolio: How To Make the Good One* by Paula Scher, *The Perfect Portfolio for Artists and Writers* by Marilyn Seguin, and *The*
Ultimate Portfolio by Martha Metzdorf, showed perfect examples of portfolio ideas. Extremely helpful, entertaining and full of advice, they had many creative ideas and examples, as well as suggestions for writing the perfect resume.

Other books such as Opportunities in Interior Design Careers by Victoria Kloss Ball; Opportunities in Visual Arts Careers by Mark Salmon, and Career Choices of the 90’s by Walker Publishing, were used only for general information.

I also looked for additional literature in a section titled “The Jobs Information Center” in the Division of Education. They had the latest literature, newspapers, brochures, and data about job searching around the country. They help students prepare resumes for job interviews.

In addition, I made visits to The Cooperative Education and Placement Center Office at RIT where they supplied me with more information about career development and job opportunities. The RIT Undergraduate and Graduate Manuals and The RIT Prospectus were two of the most valuable resources, especially for new students who wanted to know about life inside and outside the campus, facilities, resources, location, requirements, student life, facilities and costs. I compare these manuals with the Undergraduate Application for Admission and Financial Aid Guide from Syracuse University, as each of them covered the same areas but from different perspectives. This information helped me answer the questionnaire I made at the beginning of my research to help me construct the hypercard stacks. This data in specific was vital for the making of the Education and Jobs Stack.
Once the thesis proposal was approved by the committee members in the fall quarter of 1992, I began writing the thesis planning document (App. 5) and the timelines (App. 7). This included revisions and evaluations from the committee.

A thesis meeting was scheduled for February 8, 1993. During this meeting I explained my plan and strategies in order to execute this project. There were two possibilities. One, to do a project about women's issues and the second, to do a project about careers for women who wanted to study design. This would include different sections with definitions, examples of women designers' profiles, information about schools and jobs in design. I liked this idea very much and proceeded to make the necessary changes to my plan. After I gathered all the information I needed, I proceeded to do a draft including all the topics with their hierarchy.

At the next meeting (Feb 22, 1993), I showed a draft to the committee that consisted of a model of the navigational plan I wanted to use (App. 8). I used 3 by 5 cards with the topics' names and placed them in several groups forming stacks. Additional topics were listed below each stack. All these cards would link to other cards to give the user access to information throughout the project. After several meetings, the project began to take shape. The committee made various changes and recommendations. (See appendices 9, 10, 11, 12, and 13.)

In addition, weekly meetings with Professor Remington and Professor Ciolek kept
the project going forward to assure success. Sketches, computer generated documents, flowcharts, mind mapping and brainstorm sessions were essential (App. 6).
One of the most exciting activities associated with this project was designing a logo for all the documentation: the thesis work, and the poster and brochure for the thesis show in April 1993. The logo was done while assisting an Independent Study class with Professor Heinz Klinkon. (app. 22)

A series of sketches and drawings were revised during the class where I received constant feedback and comments from Professor Klinkon. The logo was produced with a computer using a drawing program called Adobe Illustrator 2.0 in an 8 1/2” by 11” work sheet. The fonts were Avant Garde Demi -450 points for the letter C of Career. For the D in “Design,” I used Akzidenz Grotesk Bold font in 325 points and then manipulated it manually using the “convert to path” feature. Helvetica Regular and Bold were used for the small type. The female symbol at the middle was done 60% black to contrast the “C” and “D”. The logo was used in B/W, green and color versions.

The final version was completed and enlarged on a photocopier to poster size, 18” by 24” from a size 8 1/2” by 11” with a 600 DPI. A brochure was created using several Hypercard cards as illustrations. The layout was done using the Design Studio application. The rest of the manipulations were made with PhotoShop 2.0.
One more important piece of research was the Chicago 93' Graphic Design Conference. During the winter quarter, I began to attend the "Students in Design" meetings to compile some information that could be useful in my thesis investigation. Clubs and design organizations were a very important part of the extracurricular activities in college. I wanted to know how these organizations might help students to develop their skills and personality throughout their college years. I observed that members of these organizations shared a similar goal. They met monthly to talk and share about design topics and issues. They had planned a series of activities to raise money to assist the design conference in Chicago.

After few visits, I became part of the group. We visited various places: the Harold Washington Library, the IBM Building in Wabash Avenue and design firms and Ad agencies throughout the downtown area (App. 23). Students were able to ask questions, share information with other members and show their portfolios. Many of them received feedback from professionals in the business. Designers revealed their experiences and secrets for success in many areas of the design business. I asked many questions concerning my thesis topic, in special to women designers in the audience. They described their early disappointments in their careers and other valuable experiences that made them grow stronger and successful.

The activity was a success! I'm happy for having this new experience. I recommend that any student interested in design or related career become part of a club or association; to participate actively and live the experience with other members. And to become part of the professional community and help resolve many of the contemporary issues in design.
Before I began creating the final stacks, a series of diagrams were made. These were checked and evaluated by the committee each time. I wrote each section on a 3" by 5" card, placed them on the table and began moving them from one stack to the other. I observed how they flowed into the navigational plan (App. 20). Everybody agreed on which cards to move, which cards to eliminate, and which cards needed to be modified.

Real improvements began to emerge after some combinations seemed to work. Afterwards, a template was created as a model to produce the rest of the cards. Next, an area for pictures, text and buttons to operate had to be selected. We had to determine the number of cards needed on each stack.

Each card was designed by using a grid (App. 16 & 17) and programmed with specific and individual instructions to link with other cards and stacks. After I moved all the resources to their respective stacks, I was able to assign one or more pictures to each card by using several scripts.

I decided to keep the left side of the card for the navigation control and the right side for pictures and text (App. 19).

Type size, color, style and spacing had their limitations considering the Hypercard elemental painting program. All the type was created in black and reverse type. The typefaces used were Futura Regular, Bold, Extended and Reverse. The Futura Outline was used only with black background. Font sizes 10, 12, and 18 points were used for the control panel. Spacing was manipulated by hand. Professor Ciolek helped me correct some fonts and style problems.
A bar with buttons was placed along the left side of the screen (App. 20). A navigation plan was designed to link the user with buttons, stacks and any other areas they might choose. All the resources were placed inside the stacks with the help of the Res-Edit software.

All the photos and diagrams used at the meetings were scanned, digitized and converted to 72 DPI with a UMAX 840 flatbed scanner and embedded into the 5 stacks. They were saved as Pict Resources and then manipulated with the PhotoShop 2.0 program.

The metaphor used on the screen presentation was a school notebook. The notebook has several tabs on the right side with the names of the stacks. This way the user would be able to select any stack they wanted. An animation of the logo was used as an opening screen for the application. It was created by copying and pasting the logo several times and reducing it 10% each time. Motion was created using the dissolving effect with each card. The size of the screen was 640 pixels wide by 480 pixels tall, covering the entire computer screen.

I needed to choose between setting the computer monitor to 256 colors and see pictures fuzzy or using million of colors setting and lose the special effects.

The music used in the Introduction was recorded with a Mac recorder, edited with Sound Edit and transferred to the computer, then saved as a sound resource. It was played in a loop until the animation was finished.

I completed only one of the five stacks, due to the short amount of time left for the
project. The other four stacks needed only general information or an "under construction" sign indicating that later on more data would be added.

This application was large due to amount of pictures and sound resources installed. It used 7 megabytes of memory and was stored on a 44 MB Syquest disk.

Data Cards

Several levels of information had to be considered. Headings, page numbers and stack names needed to have an area of their own. The labels describing each field needed to be in a location related to their corresponding information. These labels moved from the top left side of each field through the button. Different type sizes were used on the headings to separate hierarchy. I ran into problems moving my project from one computer to another. Lack of correct fonts on the computer host caused such problems.

I wrote several scripts to make the cards link with other cards and stacks. The whole project was too large for keeping it on one stack only. Therefore, I subdivided the files and made five stacks, one for each section. I copied and pasted similar information and scripts subsequently to the next card. Buttons could be copied using the same example.

Specific categories were written on the majority of the cards. One stack needed to be finished for the thesis show. The rest of the stacks would show few active cards and some "under construction" signs. More information will be added in the future.
Constant check-ups were necessary during the last days before the Thesis Show.
I needed to test the project many times to be sure everything was in order. I found
that changing from one monitor to the other created several problems with the
special effects and fonts.
Finally, the Thesis Show arrived. One group of computers was set up in the lobby and the other group was on the third floor between the Graphic Design and Computer Graphics Design classrooms, where my project was shown. We set up the rooms early in the afternoon and the panels dividing the two classrooms were removed, making more space.

The projects were divided in sections. Each student was showing his or her project to a group of people at a time. The visitors observed our projects, asked questions and made comments. Some of them wanted to try our applications themselves. I passed out a simple evaluation to my visitors asking for comments.

I experienced a few technical difficulties with the effects and with the fonts, as I expected. I took notes of minor changes that needed to be fixed after the show.

It was an exciting night! I was very happy and pleased with my work and with the comments of the audience.
My goal was to create this project to be used at high schools, career centers, the Department of Labor, public libraries, family and community centers, and women's organizations. But the truth is that no matter what age, sex or educational level, everyone could make use of it.

Before I conclude, I would like to make a comment. This project was too large to handle in so short time. The ideal situation was to present one stack and finish the rest later on after the show. Then, add new and updated information.

However, my professors suggested completing the rest of the stacks with a minimum of references and examples for the show. In addition, new stacks could be created to take the place of the old ones; pictures modified, QuickTime movies and sound integrated. Future plans to record the application on a CD are a must, due to project size.
Days before the show, I had the opportunity to test the project with several students in the computer classroom. They made comments and recommendations about the graphics, the navigational plan and the contents. This was a preliminary evaluation before the show. See App.15. I gathered more information the night of the Thesis Show and added this to the previous evaluation. I made some modifications and changes to my application after the show.
This project was an excellent experience for me, as a designer and as a woman. I thank God for this experience. I learned a lot from my research, from the making of my thesis work, from my classmates and professors and most of all, from myself.

This work gave me the opportunity to try new things, new courses, new techniques, new ways to comprehend design.

The process of producing a thesis project is painful and at the same time exhilarating. I learned how to be more creative, more patient, more communicative, and to believe more in myself. I learned to trust my skills, intuition, maturity, common sense and experience.

This project was a culmination of two years of intensive work, many sacrifices, good and bad experiences. However, if I put all this in balance, I would say, it was all worth it.

Sharing with other women designers was healthy. I observed their talents, their hunger for success and their determination. I watched their dedication to life, their work, and their community. We all share our goals and dreams in sisterhood.

I am happy for being in the right place at the right time; for having the opportunity to do what I love which is Design.
I will like to thank the members of my committee, Professor Nancy Ciolek, Professor Tina Lent and especially Professor Roger Remington for their support and assistance during the preparation of this project. I will also want to thank Professor Heinz Klinkon for assisting me through the preparation of the thesis logo.

I dedicate this project to my husband Ramón and my daughters Isandra and Ysanya: thank you for your continuous support and love.
Art- Any computer element that is not text.

Pixel- A single dot on a computer display or in a digital image.

Computer Graphics- Chart, graphs and diagrams, or pictures produced- with the aid of a computer.

Design- The arrangement of specific elements in order to achieve a specific effect

Dot- The simplest minimum unit of graphic communication

Drawing Program- An application for creating artwork or graphics for insertion into a document, spreadsheet, etc. A drawing program customarily produces a vector image.

Font- Traditionally descriptive of one typeface and style, such as Bodonibold 12 point.

Letter Spacing- The space between individual letters.

Resolution- The relative fineness of the image in a computer screen or that produce a scanner. Resolution is usually expressed as DPI, or dots per inch for a scanner or printer, as in pixels for the image on a computer monitor screen.
Save- A program command that writes data to non volatile memory

Screen- The device that displays information as it is entered on a keyboard or scanner, reports on processing by the computer, and that generally monitors its activity.

Scanner- An optical device for reading hard copy and translating it to digital data. Data read by a scanner is captured as a graphic element that can be manipulated by a paint or a draw program, but not by a word processing program unless it is converted into alphanumeric characters.

Typeface- A set of type of a particular design, as Helvetica, Bodoni, etc.

Type Size- The size of a letter, measured in points

Type Style- The design of a letter of type

Women in Design

Designer and address

Nitza Nater
346 Fairwood Circle
Rochester, NY. 14623

Client/User

Teachers, students, designers, artists and researchers.

Documentation of need

Many people are studying visual arts or graphic design at this time. The majority are women. These women plan to start a new career in the arts without necessarily knowing or expecting the problems facing them. There is a need for information to address these difficulties and issues such as sex discrimination, salary inequities and stereotypes that affect the career of women in the visual arts.

Problem Statement

An interactive media program that will provide information about the issues on women in design.

Mission

Women In Design is an interactive media program that will provide information about important issues to the end that the women will be better informed and capable of responding proactively should these issues face them.
Women Designers
- in Latin America
- in the United States
- in RIT
- in New York
- from 1900 to now
- live and work

- and Creativity
- in Print
- and Typography
- and the Arts
- and Fashion Design
- Designers and Magazine Covers
- in the Visual Arts
- in Graphic Arts
- in Commercial Arts
- in Photo/Graphic Design (Interaction of Design and Photography)

Special Women Designers Issues:

- Difficulties as being Designers
- Position as Communicators
- Position as Educators
- As Interpreter of Visual Arts
- As mythmakers - Visual Arts by the 20th Century
- Stereotyping
- Sex Discrimination and Salary
- Female Experience and Artistic Creativity
- Feminist Art Programs
- Influences
- Illustrating Common Themes in Women's Designs

Other themes related:

- Graphic Design in Educational Television
- Visual Transformation: Creative tendencies in Graphic Design

</tbody>
</table>
**Goals**

To organize and select the information to be used in the project

**Objectives**

I will design the "Women in Design IMP" application

I will provide audiovisual tools to create an amusing program to entertain and inform the user about women in design

I will incorporate all the information gathered into the Hypercard application.

To synthesize the information gathered and be able to integrate to fit the "Women In Design IMP" requirements

**Process and Strategies**

To master the Hypercard program

I will design a Hypercard application that will be easy and fun to operate.

I will design a Hypercard application to include all my research and work

I will take courses for scripting and designing the Hypercard program to create my own application

I will develop easy way for the user and tools to use the "Women In Design IMP"

To evaluate the "Women In Design IMP" and modify accordingly

I will distribute an electronic questionnaire for the collection of feedback.

I will gather information from the evaluation for later study

To make the "Women in Design IMP" available to users while at the same time updating materials for the future.

To suggest other alternatives for the application.

Dissemination

The Interactive Media Program is designed for people who want to know more about women and design issues. This application would be used in libraries, high schools, employment agencies, and careers information centers. It would be available by mail through a catalog.

Evaluation

I will implement a survey to show the effectiveness of the Women in Design Interactive Media Program. I would evaluate the project by designing a Trivia Game in which the user will answer a few questions at the end of using the program. The IMP will be designed with a special command to obtain written scores on the questions made. After that I would evaluate the project and modify it accordingly.
Hyphothetical questions about Careers for Women in Design

△ Difference between graphic design, industrial design, interior design, fashion design, computer graphics, illustration, visual arts, visual communication and other areas related to design. Primary business: advertising, inhouse-business, insurance co., research organizations, museums, manufacturers, banks, educational institutions.

△ How many years? Undergraduate program, graduate program in design?
  * 2 years
  * 4 years
  * Graduate School

△ Where?
  * Technical School
  * University
  * State University
  * United States
  * Europe
  * Art School

△ Costs, tuition, housing, expenses, health insurance, financial aid. expenses. transporation, materials.....

△ Parents have a low income....

△ How to qualify for financial aid?

△ When is the right time to apply design schools? When are the deadlines?

△ I want to be a design teacher......

△ Abilities in costume and fashion design. What can I do?

△ I am handicapped... Is there a possibility to study design? Where?

△ My hobbies are doing crafts. Could these help me to start a career in design?

△ Bests universities in the United States in design.....

△ How can I show my skills to an art school? Do I need a resume... a portfolio... an interview, transcripts of high school to college?

△ I have never studied art, but I make very good drawings and illustrations. Can I be accepted in a design school?

△ Mayor design publications

△ Low average in high school.... Can I apply?

△ I need to work to pay my expenses and bills..... can I study design part time?

△ My husband is a student, we have two children, and I would like to study design next year. What can I do?

△ I am hispanic in origin. Do minority students qualify for scholarships in design?

△ I'm from Korea. English is not my primary language. Is it possible to study design at the same time as english?

△ I was in the Army for 7 years. I have always wanted to be an industrial designer. What I have to do to get a design education?

△ I want to work designing magazine covers... How do I prepare for this job?

△ Do I need to belong to a design organization while I'm studying in design. What are the benefits, or costs?

△ If I don't find a job after graduation, could I work freelance? What do I need to do to find freelance?

△ I want to be rich and famous. Can I earn lots of money working as a designer? Could I be successful?

△ I want to know about successful women in design.... Would you name some... How did they start their careers?

△ Do you think there is a difference in opportunities for designers whether they are married or single?

△ Internships

△ International Design

<tr>
<td>Dec. 11</td>
<td>Meeting with Tesis Committee Presents: Prof. Roger Remington Prof. Tina Lent. Excused: Prof. Pamela Blum Prof. Nancy Ciolek.</td>
<td>Suggestions from Prof. Lent for changing the thesis project into a more focus project as career opportunities in the field of design. Project is divided in two parts: one focusing in what the field accomplish to women interested in design careers; how to pursue a career in design, definition, women designer's status/field, categories in design, upward mobility, minority or ethnic issues, stereotype and organizations serving designers. The second part will deal with design history and other topics related. Prof. Remington endorsed Prof. Lent's point and suggested to target high school students who want information about design careers. Another suggestion was a bilingual project (spanish and english) trying to impact ethnic groups as hispanic population in the United States or Latin America countries. Prof. Remington recommended to use the finish project with a high school in Rochester.</td>
</tr>
<tr>
<td>Dec 16</td>
<td>Meeting with Prof. Tina Lent Working with a new sketch or plan for Career Opportunities for Women project</td>
<td>I will design a list of hypothetical potential women who are looking for information about design. I'm going to use four or five examples of: a high school female student, a forty years old woman returning to the work force, a women who want pursue a special degree in art education, a student who wants to know the difference between a two-year degree, a four-year or graduate level degree and other cases related. After that I will work with some hypothethical questions about design careers that may be these persons were asking themselves. After finishing using this data I will have a substantial output of the information required to start my research.</td>

<tr>
<td>Feb 15</td>
<td>Working on categories. On the last meeting, Prof. Remington gave me some Hypercard material with examples on how the navigator systems works and how it connects within other areas of information. There was also a disk containing a copy of a Hypercard stack of information about The History of Graphic Design (The National Graphic Design Archive). This disk has some examples of how the application could be manipulated to connect to other functions.</td>
<td>I have developed a model of the navigator using Education as one of the categories. I developed a connection between the categories which form a part of the educational topic. I will be working on this model until next Monday, February 22, when hopefully, I will be able to show it to several members of the committee. I will meet with Prof. Remington on Tuesday 23 to show the work done during this quarter. I would have also an evaluation of my project for this quarter with recommendations and feedbacks from the committee. Next Spring Quarter, I will start my project, depending on the evaluations and feedbacks received at the end of the Winter Quarter.</td>

CONNECTIONS
it seems like there are 2 very different projects here that 

compare a very ambitious undertaking. One project 

deals with career opportunities in the field of design 1 incorporates # 1, 2, 3, and 8. The other project consists of # 4, 5, 6, and 7 and is an historical survey of women in design. To do either of the well is a full-time project, to do both would lead to superficiality. Suggest the emphasis be placed on the first project, w/ references supplied so a user could follow through w/ the second on their own.
Suggestions & Comments:
Prof. Pamela Blum

Few "readers" will get to questionnaire at end of document. Find another way to evaluate.

Project has become significantly better organized (Bravo!)

Large heading needs clarity. Make sure

Choose graphic formats

Organize HyperCard stack.

Suggestions & Comments:
Prof. Nancy Ciolek

Nita's project has come a long way. It seems she has organized the material well.

Begin to develop physical static in HyperCard.

Rename some of the headings. (Please.)

Suggestions & Comments:
Prof. Tina Lent

Nita's project has come a long way. It seems she has organized the material well.

Was her subcategories clear? Students gotten feedback from the committee?

Nita's going.
Recommendations.....

- change title
- titles of categories
- realign segments of info into categories
- sub categories
- begin visual interactive design

Comments.....

use references to sources. Don't try to answer every question - give where users can get it.

- make a workable prototype

- you have a good workable construct here to build on.

Prof. Nancy Ciolek
Change title to "Matrix of Resources for Prospective Designers"

Recommendations....

- Clarify hierarchy to categories and subcategories in each category.
- To define categories, think about consistency, key words, and what needs to be cross-referenced.

Comments....

- Project is coming together. It's time to start graphic design hierarchy, refining key non-referenced words. Perhaps each category could contain one example.
- Project can be filled out and marketed by others.

Prof. Pamela Blum

Types of Promotional Pieces

A two-dimensional printed promotion piece is the most commonly used by artists. These printed pieces can be:
- a letterhead system including business cards
- a self-mailer post-card
- a panel card mailed in an envelope
- a folded card mailed in an envelope
- a one-page flyer
- a multi-page brochure
- a folded or spiral-bound booklet
- a flip book
- a résumé
- a reply card
- a newspaper
- a newsletter
- bookmarks

A letterhead, envelope and business card should be the first pieces you produce. A well-designed letterhead can also function as an estimate or billing form, thus keeping costs down. A logo or graphic element used consistently throughout your two-dimensional pieces ties together diverse items, unifies a package, and creates the impression of a prepared, well-organized individual.

Appendix 20
Nitza Nater Arvelo
Rochester Institute of Technology
1993 Thesis Exhibition • Friday, April 30 • 7:00-9:00pm
College of Imaging Arts and Sciences • School of Art and Design
You will find in this section important data on how you apply to schools and other factors at the time you will choose an Art School. You should determine the strengths and weaknesses of each school as they relate to your own personal interests in art. For example, if you are interested in becoming an art director at an advertising agency, in publishing, or in another type of business, you should consider those art schools that are strongly oriented to the areas of advertising and editorial design and illustration. This means the emphasis of the curriculum will be geared more to the commercial aspects of art than the aesthetic areas.
SCHEDULE

Friday April 16th
Conference Opening and registration:
5pm on Friday is registration
6:00pm is welcome and opening remarks,
6:15pm is the presentation by Rick Valicenti at the
Harold Washington Library Auditorium
400 South State Street.
This will probably last to about 8 or 8:30 approx.
(Suggestion: we all go to Jeno's pizzaria (the authentic Chicago pizza joint) afterwards??)

Saturday April 17th
at IBM building at 330 N. Wabash Ave. (north bank of the Chicago River)
9:00am - Continental Breakfast (free FOOD!!!!) and registration/check in.
9:45 welcome
10:30am: morning sessions at design offices;
12 noon: lunch break with tour group (you will need MONEY for this)
3:30 pm Reception at American Center for Design Gallery (this is limited to 175 students and is totally optional)
Evening:
free time -- have fun and be safe. I will not bail you out of jail! (ha!)

Sunday April 18th
IMPORTANT— you must check out before going to the portfolio sessions.
Have the hotel hold your bags— get a claim ticket. Check out is by 12 noon.

9:00am—registration and Continental Breakfast (free FOOD)
9:45am— Portfolio review sessions begin these are one-on-one sessions who will critique your work, discuss employment strategy and professional practice.
10:00am— ongoing 1/2 hour design career breakout sessions
Apple computer will have demonstrations and a rep to answer questions during this time (9-12)
12:30— conference adjournment

Leave hotel at 4pm!!!! be there!!! Suggest you get luggage and change clothes in restroom before departure.
DON'T TAKE JUST ANY JOB: THE JOB SEARCH PROCESS

- Prioritize the most important aspects of a job
  Location, type of projects and client base, salary, benefits, hours, company personality and style - formal and business like, informal and easy going.

- Research companies to contact
  Research companies in order to focus your job search:
  - ACD Members Directory (available to members only)
  - Awards and show books and magazine annuals (Graphic Design USA, Communications Arts Design Annual, Print Regional issue)
  - Alumni and faculty contacts
  - Former classmates and friends
  - Business press
  - ACD Creative Registry
  - Search firms

- Record of job search
  Create a record of your job search. Alphabetically by company name, in a three ring binder, insert all correspondence. Include dates of contact via telephone and in person interviews, contact name, title and impressions of the firm.
  Within the binder, insert your job priority list, resume, standard cover letter and thank you note format.
  As difficult as it may be to think ahead to your future job searches, you will find these contact names invaluable.

- Cover Letter/Resume
  Contact the decision maker.
  Accompany all resumes with a personalized cover letter stating your professional objective.
  Call the company to confirm address, spelling of name and title of the person.
  Double check all spelling.
  To gain interest and create recall, insert color copies or slides of a few items from your portfolio.

- Contact
  Never drop in on someone without a scheduled interview.
  Introduce yourself with a resume and letter.
  Telephone to set up an interview approximately three work days after receipt of resume.
  When speaking to the person you contacted, state your first and last name and that you sent them your resume and samples. Ask for an appointment to show your work and to learn more about their company.
  Even if the company is not hiring, ask for an interview.
  Be prepared with your available dates and times to set up an interview.
  Confirm the appointment, day and time, the prior work day.
  If the company is unable to see you, ask if there is another firm they would recommend you contacting.
• The interview
Allow extra time in order to arrive promptly.
Your interview may last from 15 minutes to 1 hour. Allow for extra time, assuming that the interviewer is running late.
Your first impression is your personal presentation. Dress in proper business attire, as if you were representing the company to a client. (Clients are not designers.)
Bring extra resumes and give the interviewer a copy, even though you sent one.
Have a firm handshake.
Your are interviewing the company as they are interviewing you. Ask to see the workplace and samples of their projects.
Get a business card from the interviewer.

• Immediately following the interview
In your job search record, write down your impressions of the company, people, work style, clients, likes and dislikes. Note the date of the interview and the interviewer’s name.

• Follow-up
Send a thank you note within a week of the interview. Personalize the note and include another resume.
Have a calendar to record, in pencil, interview dates/times. Use post-it-notes to remind yourself of follow-up calls and correspondence.
Recontact, if you want to work at the firm, by telephoning 4-6 weeks after the interview.
When you get a job, send everyone a note announcing where you have taken a position, thanking them for their time and support.

• Tips on professional conduct
Everyone you meet is a prospective contact.
Become active in the professional community, attend meetings and seminars. Volunteer for committees. You will meet others in the profession, learn more about the design field and hear of openings.
Don’t confuse professional with personal relationships.
Always present yourself professionally.
Never burn bridges. They may be a reference one day.
Maintain contact with college alumni and faculty.
Be a resource for others.
FRIDAY, APRIL 16

CONFERENCE OPENING

WILLIAMSBURG LIBRARY
100 S. STATE STREET
9:00AM  REGISTRATION
10:00AM  WELCOME AND INTRODUCTION
11:00AM  TOUR
12:00PM  LUNCH
2:00PM  TOUR OF ESTATE WINE
3:00PM  TOUR OF ESTATE RHYTHM

The WilliamSBurg Library is located at the corner of State Street and Congress Avenue. The library is very large, taking up an entire city block. You can't miss it!

Parking is also available at a number of lots located along State Street near Congress. There is also a lot on South Union Avenue between Congress and Van Buren. Parks for the bus and train are also near the library.

SATURDAY, APRIL 17

DESIGN OFFICE VISITS

IBM BUILDING CAPPERSIA
330 NORTH WAPPAH
9:00AM  REGISTRATION
10:00AM  CONTINENTAL BREAKFAST
11:00AM  WELCOME AND INTRODUCTION
12:00PM  TOUR OF DESIGN OFFICE
3:00PM  LUNCH
4:00PM  TOUR OF DESIGN OFFICE

WHILE VISITING THE OFFICE, STUDENTS WILL SEE PRESENTATIONS OF CLIENT WORK, AS WELL AS VISITS TO EXECUTIVE, PRACTICE ROOMS. THIS IS THE CHANCE TO LEARN WHAT YOU'VE WANTED TO KNOW ABOUT THE DESIGN PROFESSION BUT NEVER APPEAR TO BE!

STUDENTS WILL BE DIVIDED INTO SMALL GROUPS FOR THE OFFICE VISIT. EACH GROUP WILL HAVE A VOLUNTEER GUIDE. STUDENTS FROM THE SAME SCHOOL WILL MOST LIKELY NOT BE IN THE SAME GROUPS. GROUPS WILL BE SHARING TO THE DIFFERENT OFFICES, SO BE PREPARED TO WALK A LOT IN THE INTEREST OF GATHERING.

IF THE WEATHER IS INFLUENCED WEATHER, A FEW OF THE OFFICES ARE FAR ENOUGH AWAY FROM THE STRATEGIC POINT THAT THEY MAY DECIDE TO TAKE A CAB OR THE SUB. THE SUB IS ONLY $2.00, AND ISSUED FOR THE ENTIRE VISIT, SO YOU WOULDN'T BE MORE THAN $2.00 PER PERSON.

THE GROUPS ARE ENCOURAGED TO STAY TOGETHER, AS MANY OF THE OFFICES WILL BE DIVIDED INTO DIFFERENT GROUPS TO MAKE TOURS. EACH GROUP GUIDES WILL HAVE A LIST OF LUNCH PLACES NEAR BOTH OFFICES. IF YOU DO GO SEPARATE FROM YOUR GROUP, YOU MAY CALL THE AMERICAN CENTERS FOR DESIGN OFFICE FOR RESISTANCE AT 1PM.

SUNDAY, APRIL 18

DESIGNERS SUNDAY

IBM BUILDING CAPPERSIA
330 NORTH WAPPAH
9:00AM  REGISTRATION
10:00AM  CONTINENTAL BREAKFAST
11:00AM  INDIVIDUAL PORTFOLIO REVIEWS
12:00PM  DESIGN CAREER BREAKOUT SESSIONS [OUGHTING]
12:00PM  CONFERENCE SESSIONS

STUDENTS WHO HAVE REGISTERED TO GO MUST MEET ONE OR MORE PRACTICING DESIGNERS. STUDENTS ALSO HAVE THE OPPORTUNITY TO ATTEND SEVERAL HOUR-LONG DESIGN CAREER BREAKOUT SESSIONS.

THREE BREAKOUT GROUPS WILL PROVIDE STUDENTS WITH INFORMATION ON PREPARING FOR THE JOB SEARCH. SESSIONS WILL ALSO PROVIDE INFORMATION ON A VARIETY OF DESIGN CAREER OPPORTUNITIES, SUCH AS COMPUTER PRODUCTION, ABRASH BOOKS, OR MANAGEMENT POSITIONS. REPRESENTATIVE STUDENTS WILL SIGN UP FOR THREE SESSIONS ON SUNDAY MORNING.

REPRESENTATIVES FROM APPLE COMPUTER WILL BE ON HAND TO DEMONSTRATE PRODUCTS THAT ARE CHANGING THE DESIGN PROFESSION.
